The Growing Project believes that food is a basic human right and we promote this through direct agricultural experiences, education, community building, economic opportunities, and advocacy. We are confident that your organization shares our commitment to ensuring a healthy and sustainable Fort Collins for all. We would like to discuss the possibility of developing a mutually beneficial sponsorship partnership that contributes to the promotion of an environmentally and socially just local food system.

As you may already know, corporate sponsorship is an excellent way to increase brand recognition and reach a wider audience while supporting an organization that aligns with your values. The back of this sheet highlights our sponsorship levels, and you can find more information about our efforts on this front page. Your sponsorship contributes to the success of our growing season, helps us continue to feed our community, as well as supports our goal of establishing a critically needed urban farm in a disproportionately food insecure area of Fort Collins. Thank you for considering this proposal, and we look forward to hearing from you soon!

The Commons Garden
225 Maple St, Fort Collins

The Commons Garden is an educational and accessible community space where people build and care for relationships with land. We work with community members of all ages and abilities to grow and steward a diversity of vegetables, fruits, and flowers. TGP then distributes all harvests directly to the community!

Horticulture Therapy (HT)

HT provides weekly tactile, team-based garden activities at the Commons Garden and local long-term care facilities for adults. The program offers participants an accessible way to directly engage with urban agriculture and gardening while building independence, working on social skills, and learning about food and nutrition!

Kids Feeding Kids (KFK) co-hosted with the FoCo Cafe

KFK is a free bilingual (Spanish-English) summer program that provides breakfast and fun activities for families with pre K-12 students. KFK seeks to specifically support Latinx/e and other marginalized families who may be experiencing food insecurity. During the program, families enjoy nutritious meals and participate in outdoor activities that encourage wellbeing and connections to nature through play, arts and crafts, and more!

Garden Education

An environmentally and socially just local food system requires reconnection between people, food, and soil. TGP promotes this by creating and supporting educational spaces where community members of all ages can learn and share knowledge on sustainable growing practices!
## Sponsorship Levels
